

SmartPLAN™

Digitalization of well and rig operations

The SmartPLAN™ tool seamlessly manages both the operator's and drilling contractor's workflows to continuously improve well manufacturing and delivery.

**Efficient.
Collaborative.
Quality Assurance.**

Procedural Adherence

Step-by-step guidance through the operator's and drilling contractor's workflows ensure compliance with best drilling practices, and HSE procedures during all rig operations. All instructions needed to drill to-plan are delivered to the driller's HMI for simple, quality execution spud-to-spud.

Identify Flat Time

Digitalization of the workflows maximizes transparency throughout the drilling process. Through detailed reporting and collaboration with our Digitalization Engineer, the operator can easily identify the sources of flat time and mitigate the flat time events in future well, or pad, manufacturing process.

Automation Integration

The SmartPLAN™ task manager integrates seamlessly with the recipe manager and automation tools like SmartDRILL™ and SmartSLIDE™ systems to trigger automation or drilling parameters through pre-determined events in the well plan or at a defined depth.
