Offshore Casing Running in the Deepwater

 Improved Overall  Reducing of

 safety  rig personnel

Challenge

- Customer needs to get casing string to the bottom in an offshore operation with the use of a CDS™ and the addition of MLT rings

Solution

- By using the CDS™, the customer was able to get the casing string to the bottom and the use of MLT rings assisted in tight spots. The combination provided the ability to safely pick up, stab and make connections while the automation reduced head count and minimized risk of injury.

Results

- The job was completed in a safe and timely fashion, achieving total depth with no complications, and with the reduction of rig personnel, the CDS™ improves productivity and enhances work site safety.
