PERFORMANCE DATA

ILLUMIC™ Shines Bright in Saudi Arabia

Canrig installed the ILLUMIC™ lighting system across four rigs in Saudi Arabia for a major customer to enhance workers' visibility and illuminate the worksite.

Installing the ILLUMIC lighting system enables the four rigs to save up to **852 kWh of energy** and **116 gallons of fuel** when not using traditional diesel-powered light towers.

The ILLUMIC™ lighting system greatly improved worker visibility during nighttime operations, enhancing safety and productivity, while contributing to reduced emissions and operational costs.
